

JANANI

MERN STACK DEVELOPMENT

To test the new certificate generation with the template and sequential numbering, follow these steps:

DINESH KUMAR
CEO of By8labsAI

1. Open the Student Module

Navigate to your admin dashboard and select the Certificates module from the sidebar.

NANCY
HR of By8labsAI

2. Issue a New Certificate

Click the "Issue New Certificate" button at the top-right.

Select Student: Type "janani" or select any student from the searchable dropdown.

Check Auto-fill: Verify that the Course Name and Duration populate automatically.

Enter Content: Add a description (e.g., "Successfully completed the program with outstanding performance").

Generate: Click "Generate Certificate".

3. Verify the Output

Once generated, the student will appear in the "Completed Certificates" tab.

Click the "View" button (eye icon) on the right side of the student's row.

Check the PDF:

Top-Left: You should see No: B8LAB1001 (or the next number in sequence).

Top-Right: You should see the current date (e.g., Date: 08/05/2026).

Background: Your course certificate.jpeg should be visible as the background.

Text: The student's name and course should be centered.

4. Test Sequential Numbering

Generate another certificate for a different student. The certificate number should automatically increment to B8LAB1002.

Tip: If the text positions (like the name or course) aren't perfectly aligned with the lines on your JPEG template, let me know and I can move them up or down for you
